

MARBLE COAT

SILVER MARBLE COAT & BLACK MARBLE COAT

MARBLE COAT when used as instructed is most likely to produce the most incredible effect with the least amount of effort.

Every pattern will be totally unique and is able to be top coated with any Spray Chief Candy Apple you choose for a show-stopping finish.

MARBLE COAT is a product re-developed by Spray Chief with many more performance enhancing characteristics than any other similar product.

The benefits of Spray Chief MARBLE COAT:

1. A heavy bodied solution that enables you to do vertical work with ease i.e. sides of cars, boats etc.
2. Quick drying for top coating (when dry enough to top coat the pattern will dry to a Satin finish).
3. Large bright Silver Pearl for added effect through Candy Apple. Or Black MARBLE COAT over Silver Base (Silver Base used for Candy Apple applications).
4. Usable over nearly any Base Coat.
5. Able to be Candy Apple top coated with 2:12 Pack, 4:12 Pack, C.O.B. and Acrylic Candys.
6. Anti settle agent retards settling of Pearl particles.
7. May be masked on after approximately 1/2 hour of drying to a matt finish using 3M fine line tape (No inter coating necessary).

Because Spray Chief has no control over the thickness or amount of coats applied and the weather conditions on the particular day of use, all instructions are a guideline only and test panels should be done.

MARBLE COAT DIRECTIONS

SILVER MARBLE COAT is designed to be sprayed directly onto your base coat or primer and before the MARBLE COAT dries a pattern is able to be etched into it. A dark base coat or Spray Chief Black 2 Pack Primer is recommended.

Once an area has been decided on it should be masked with fine-line (3M) tape, not normal masking tape as the MARBLE COAT can seep under this. If this does happen it can be removed after unmasking by wax and grease remover or rubbing with wet and dry.

Once masked, spray 2 - 3 wet coats of MARBLE COAT onto the panel and immediately lay Glad Wrap or Cling Wrap over this while it is still wet. Lightly pat this down and then carefully remove to reveal your pattern. Once dry apply Candy Apple of your choice to produce a "one off" work of art. You can respray the MARBLE COAT onto the panel if

the pattern is not what you want or if an area dries before you get the desired effect and then it can be redone to form a new pattern.

NOTE: Always try test panels first, as this will give you your own personal technique for doing the job that counts. Laying cling wrap on the panel seems to give the best results, but simply screwing up the wrap and dabbing it gives another type of pattern as well.

EXAMPLES:

Using SILVER MARBLE COAT over Spray Chief 2 Pack Black Primer and then top coating with Spray Chief Candy Apple Brown an incredible artificial wood effect is achieved.

Combine Gold Candy and Brown Candy to produce a walnut effect.

Or quite differently, spray your parts with Spray Chief Ruby Red let dry, mask and MARBLE COAT a panel, let this dry and top coat with Spray Chief Candy Apple Red.

Remember; let each stage dry before proceeding to the next stage.

MARBLE COAT `BLACK' is also available for an even more stunning effect. This must be applied over Spray Chief Silver Base. Once dry apply 1 - 2 coats of Spray Chief MARBLE COAT BLACK then apply Cling Wrap as above. Once this is dry and top coated with Spray Chief Candy Apple richer and more noticeable patterns are produced than with the Silver Pearl MARBLE COAT.

YOU ARE ONLY LIMITED BY YOUR IMAGINATION.

NOTE: Please use all Spray Chief Products to ensure ultimate results.
